AIDIEL ZIAT

+60 19 854 0708 | aidiel.haikal0708@gmail.com | aidielziat.com

Technology consultant with 4 years of experience delivering data-driven strategy and analytics solutions for financial services clients across ASEAN. Combines deep technical grounding in AI/ML, AWS deployment, and credit risk modelling with a consulting approach: framing client problems into testable hypotheses, translating analysis into clear business narratives, and driving recommendations that senior stakeholders act on. Track record of delivering analytics workstreams end-to-end, from problem definition through production deployment, including banking use-case model development, ETL pipeline architecture, and LLM-powered automation. Recently completed a Master of Artificial Intelligence at Universiti Malaya, researching regulatory compliance automation using knowledge graphs and LLMs.

SKILLS

Languages	Python (TensorFlow, PyTorch, scikit-learn), SQL, R.
Cloud & Data Engineering	AWS (SageMaker, EC2, Step Functions, Lambda, RDS, Glue, Amplify), Snowflake.
Visualisation & Reporting	Power BI, Amazon QuickSight.

PROFESSIONAL EXPERIENCE

Deloitte Consulting SEA May 2024 – Present

Consultant in Technology & Transformation – AI & Data

Retail Banking Data Lake Project, FSI

- Designed and implemented a dimensional data model (star schema, fact and dimension tables) for customer retention and other use-cases on AWS cloud platform.
- Engineered ETL pipelines (S3 to Glue to RDS) with incremental load patterns, handling late-arriving data and ensuring full auditability of data transformations.
- Architected an end-to-end customer churn system, utilising SageMaker for model hosting and EventBridge for automated orchestration that outputs account-level churn risk scores.
- Validated system performance through User Acceptance Testing (UAT) on pre-production datasets, coordinating sign-off across technology and business stakeholders.

Quality Assurance ("QA") Automation for Contact Centre, FSI (Insurance)

- Designed ETL pipelines to ingest, transform, and load call recording data from S3, orchestrated via AWS Step Functions, transcribed audio at scale using Amazon Transcribe, and routed structured outputs to AWS Bedrock for LLM-based sentiment scoring.
- Automated call transcription and sentiment analysis, driving an approximate 40% reduction in operational costs while enhancing the scalability and speed of compliance monitoring.
- Facilitated weekly cadences, client demonstrations, as well as managed communications with AWS stakeholders to ensure funding requirements were met, ultimately securing the project funding.

APAC Human Resource Tracker, Internal

- Architected a scalable Microsoft Azure-based data lake using Databricks to ingest and harmonise fragmented workforce data, establishing a standardised APAC-wide schema and ETL pipelines to ensure cross-regional data consistency.
- Designed and implemented an AI chatbot enabling resource managers to query workforce metrics through natural language, integrated with Power BI dashboards for hybrid analytical experience.

PwC Malaysia Sep 2022 – Mar 2024

Associate in Financial Risk Management

MFRS9 / IFRS 9 Credit Risk ECL Model Implementation, FSI

- Developed Point-in-Time (PiT) Probability of Default (PD) models using logistic regression, providing the input to the MFRS9 three-stage ECL framework, covering both 12-month ECL (Stage 1) and lifetime ECL (Stages 2 and 3).
- Built macro-conditional PD models in Python and R, regressing Through-the-Cycle (TTC) default rates against macroeconomic variables (e.g. GDP growth, Overnight Policy Rate (OPR), unemployment rate) to produce forward-looking, scenario-weighted PiT PD estimates as required under MFRS9 requirements.

Application / Behavioural Credit Scorecard Development

- Developed an application scorecard for Retail portfolio using logistic regression with Weight of Evidence (WoE) binning and Information Value.
- Optimised scorecard cut-off by maximising Gini coefficient and aligning approval rate with portfolio risk appetite.
- Conducted model validation using Gini / AUC metrics, and Population Stability Index (PSI) monitoring.

Attrition Modelling Analysis, Internal

- Conducted exploratory data analysis (EDA) on large-scale anonymised employee datasets to identify demographic and behavioural predictors of attrition.
- Developed and optimised LightGBM and XGBoost classification models using Optuna and GridSearchCV with SHAP explainability to identify top predictive features.

EDUCATIONAL BACKGROUND

Universiti Malaya Oct 2024 – June 2026
Master of Artificial Intelligence *CGPA: 3.97*
Relevant Courses: Advanced Machine Learning, Explainable AI (XAI), Research Methodology, Practical Deep Learning, Data Analytics and Natural Language Processing.

The University of Manchester Sep 2019 – Jun 2022
BSc (Hons) Mathematics and Statistics *First Class Honours*
Relevant Courses: Multivariate Statistics & Machine Learning, Generalised Linear Models, Time Series Analysis, Markov Processes, and Linear Algebra.

PROJECTS

- **Master's Thesis – Agentic GraphRAG for Regulatory Compliance:**
  Architected a hybrid knowledge-graph and Retrieval-Augmented Generation (RAG) system using LangChain, Neo4j, and Gemini (via API) to automate the interpretation of regulatory policy documents. Designed the system to map role-level responsibilities across regulations and surface practice variations between jurisdictions, enabling faster, more consistent cross-market compliance comparison. Positioned as a first-pass triage tool for risk and compliance teams, cutting the scope of manual review before deeper analysis is conducted.
  - *Skills: LLM, Knowledge Graphs, RAG, LangChain, Neo4j*
- **Serverless website using AWS.**
  Deployed professional portfolio on AWS Amplify with CI/CD pipeline integrated with GitHub. Leveraged Route 53, AWS Certificate Manager (ACM) for SSL/TLS provisioning, and CloudFront for global edge delivery demonstrating full cloud infrastructure capability.
  - *Skills: AWS (Amplify, CloudFront, Route 53, ACM), CI/CD*
- **Malaysian Sign Language ("MSL") Translation System.**
  Developed a BiLSTM-based vision translation system for 84 MSL glosses, improving accuracy from 84.8% to 97.7%. Engineered MYSignLingo, a prototype application with real-time gesture recognition and progress tracking.
  - *Skills: Computer vision, Deep Learning, BiLSTM*

CERTIFICATIONS

- AWS: Associate – Machine Learning Engineer
- AWS: Foundational – Cloud Practitioner
- WorldQuant University: Applied Data Science Lab
- Coursera: Advanced Learning Algorithms
- Coursera: SQL for Data Science
- Coursera: Introduction to ML in Production
